

Conditions for our project from different point of views

User conditions

As a user I want to have a clear overview of all the parameters in order to know what is going on during the simulation.

As a user I want to be able to change the parameters and play with the values in order to try out different things.

Developer conditions

As developers we want to make quick changes in order to form the project to our liking.

As developers we want to keep the source code as clean and tidy as possible in order to keep the code mouldable and readable.

Client conditions

As client I want to have an overview of the project at any time in order to keep up with the progress and all changes.

As a client I want to have regular updates on the project in order to have things changed in case they don't fit my expectations.
